A growing body of evidence demonstrates that healthcare facilities play critical roles in driving the patient experience, operational efficiencies, and patient health outcomes. Although data-driven approaches are prevalent in healthcare, a lack of architectural data has resulted in these crucial assets being overlooked as tools for health system improvement. In this lunch seminar, MIT alumni and co-founders of Spatio Metrics will discuss how their startup is leveraging data science and machine learning to enable a data-driven approach to building design and management.

Sonal Singh is co-founder and CEO of Spatio Metrics.

Jim Peraino, RA, EDAC is co-founder and CTO of Spatio Metrics.
